

Elvis R. Pino Bolivar

SENIOR FULL-STACK ENGINEER • AI PRODUCT ENGINEERING

10 years building full-stack software. Recent work: integrating large language models and predictive systems into products running in production.

Orlando, Florida • Open to relocation & remote work

PROFILE

Full-stack engineer with **10 years of experience** across TypeScript, React/Next.js, .NET/C# and NestJS, and founder of a technical consultancy. I design and operate systems where AI is a production component, not a demo: **Large Language Model (LLM) integration via REST API (Google Gemini)**, prompts with empirically validated anti-hallucination constraints, and statistical predictive models with **out-of-sample validation**. My design principle: the model explains, deterministic code decides.

TECHNICAL SKILLS

AI & DATA	LLM integration (Google Gemini API, prompt engineering, structured prompt design, graceful degradation) • Prompt evaluation (empirical criteria measurement) • Statistical predictive modeling (ensembles, backtesting, out-of-sample validation) • AI-assisted development (Claude Code, Cursor, Antigravity)
FRONTEND	React, Next.js, TypeScript , React Native, Expo, Redux, Tailwind CSS, HTML5/CSS3, Vue
BACKEND	NestJS, .NET / C# , Node.js, Express, GraphQL, RESTful APIs, PHP (Laravel), Python, Java, Entity Framework
DATA	PostgreSQL, Redis , SQL Server, MySQL, MongoDB, Supabase, Azure SQL, schema design
CLOUD & DEVOPS	Vercel , Railway, Azure / Azure DevOps, AWS, Docker, Git, CI/CD, Swagger, Jest
AUTOMATION	UiPath RPA , business process automation, third-party API and service integration
LANGUAGES	Spanish (native) • English (professional)

EXPERIENCE

2023 – Present Remote	Founder & Full-Stack Developer Nesty C.A. – Founded and lead a technical consultancy focused on automation, web/mobile development and API integration, owning the full cycle: client acquisition, requirements, architecture, delivery and support. – Design automation solutions using AI models and microservices architecture to optimize client business processes. – Architect scalable systems with modern frameworks, setting maintainable code standards and review practices for AI-generated code. NestJS • Next.js • React Native • TypeScript • .NET/C# • Microservices • AI Models
2022 – Present Cocoa, FL	Internal Applications Developer Walmart Inc. – Build and maintain internal web applications used by store staff for daily operations. – Streamline internal processes through custom web solutions, reducing manual steps in recurring tasks. – Provide technical support and continuous improvement for tools in active use, prioritizing stability and usability. PHP • MySQL • Internal web applications

2022 — Present
Remote

Full-Stack Developer — Freelance
Various Clients

- Delivered **9+ web and mobile applications to production**, including e-commerce, financial platforms, and an app published on the **Apple App Store**.
- Built REST APIs with NestJS, PostgreSQL and Swagger documentation, deployed to Railway and Vercel with CI/CD.
- Implemented authentication and authorization (Firebase, Supabase, JWT) and security practices across public-facing applications.
- Accelerated delivery through **reusable component libraries** and AI-assisted development workflows with systematic review of generated code.

React · Next.js · TypeScript · NestJS · PostgreSQL · Supabase · React Native · Vercel

2020 — 2022
Remote

Backend Developer — Freelance
Various Clients

- Developed and maintained **15+ backend services and APIs** using .NET/C#, SQL Server and MySQL across client projects.
- Designed database schemas prioritizing integrity, query performance and service availability.
- Partnered with frontend teams to integrate interfaces with business logic, and supported deployed applications in production.

.NET · C# · SQL Server · MySQL · Entity Framework · Visual Studio

2017 — 2020
Venezuela

Software Engineer
IT Driver C.A.

- Automated **20+ business processes with UiPath RPA**, substantially reducing manual processing time.
- Built complete web applications with PHP (Laravel), MySQL and responsive design, plus desktop applications in C# and Java.
- Participated in code reviews and pair programming; implemented automated testing and continuous integration workflows.

PHP (Laravel) · MySQL · C# · Java · UiPath · Bootstrap · Git

FLAGSHIP PROJECT — AI-POWERED ALGORITHMIC TRADING PLATFORM

Independently built and operated research and execution system. The most complete evidence of my work in applied AI, data engineering and real-time systems.

~283k LINES OF TYPESCRIPT 380 FILES	5 INDEPENDENT SIGNAL ENGINES	+1.29% MODEL EDGE OUT-OF-SAMPLE	59.4% DIRECTIONAL ACCURACY 50.1% BASE RATE
--	---	--	---

- **Production LLM integration:** custom **Google Gemini** client over REST API with timeout control, temperature tuning and token budgeting; **5 specialized prompts** across 3 services, with **graceful degradation** — when the model fails, the product keeps operating. Diagnosed and fixed an LLM API regression with documented A/B testing.
- **Data-driven prompt engineering:** wrote scripts measuring whether **each prompt criterion carries real predictive information** and removed those that did not. After measuring ~25 signals, established the core architecture: **the LLM does not predict — it explains numbers already computed in code**.
- **Custom predictive model:** weighted voting ensemble over 5 features with a net consensus threshold and 72-hour horizon. Validated with **permutation testing, Bonferroni correction and out-of-sample splits** (positive across both halves).
- **Quantitative rigor and observability:** **reverted my own best-performing signal** (+1.76%) after auditing it against a 9,478-sample bull regime where it produced negative edge. The system **persists every model reading and verifies its accuracy** against real price data every 10 minutes.

Next.js 15 · React 19 · TypeScript · PostgreSQL (Neon) · Redis (Upstash) · Railway · Google Gemini API · Telegram Bot API · ~46 symbols in parallel

SELECTED PROJECTS

Go190 Store APP STORE

Full-stack mobile application published on the Apple App Store. React Native + Expo with a NestJS backend, Google Sign-In authentication via Firebase and data synchronization with Supabase.

apps.apple.com/app/go190-store · React Native · Expo · NestJS · Firebase · Supabase

Sports & Gaming Prediction System IN PROGRESS

Second predictive system in development, applying the same statistical validation and model observability methodology to the sports events domain.

TypeScript · Predictive modeling · Real-time data ingestion

Modern E-Commerce Store

Complete platform with catalog, cart, checkout, order tracking and an admin dashboard. Image optimization via Vercel Blob.

my-ecommerce-app-delta.vercel.app · Next.js · TypeScript · Supabase · Tailwind

EDUCATION

2012 – 2017	B.Sc. Systems Engineering Universidad de Margarita (Unimar) — Venezuela
2008 – 2012	Computer Science Diploma Maria Auxiliadora II — Venezuela
